Abstract of DE10033033

An emulsifier (10), in the form of a gas jet pump, has a milk-inflow pipe (15) which has an aperture to the emulsifier and has controls for switching the foam-making process on and off. A gas-flow generator (20), in the form of a gas pressure accumulator, is connected to the emulsifier and or to the milk-inflow pipe. The gas pressure pump is connected to a steam-pipe (14) leading to the gas jet pump.
